                                                                                                                                                                                                                                               ö
                                                                                                   The present sequence represents a specific example of an anti-gastrin-17 inmunogen, comprising the N-terminal 9 amino acids of gastrin-17 conjugated to an immunogenic carrier such as Diphtheria toxoid, by a spacer peptide. This immunogenic composition is used in a new treatment of glycine-extended gastrin-17 (G17-G1y)-dependent gastrointestinal tumnours. Anti-G17 immunogenic composition is used in a new treatment tumnours. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-G1y as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. The novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunogenic; treatment; hypergastrinemia; gastrin G17; gastrin G34; / pernicious anemia; anti-ulcer; proton pump inhibitor; colorectal diséase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel mathod for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, particularly those with pernicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents an antigastrin-G17 immunogen. The invention relates to a method for treating tumours by immunologically neutralising a tumour growth factor and administering one or more chemotherapeutic agents. The method is useful for treating tumours, especially gastrin-dependent tumours, including colorectal, stomach, pancreatic and hepatocellular adenocarcinomas. The combination of anti-G17 immunisation and chemotherapeutic agents increases the therapeutic effects in controlling or inhibiting colorectal tumour growth
                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer.
                                                             Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer.
                                                                                                         Example 1; Page 3; 17pp; English.

The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer.
                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to proton pump inhibitor: The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the coil production stimulating level (gastrin). Reduction of dosages is desirable for prolonged treatment of GERD. In a combination therapy with L2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintenined by occasional bodster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The

The present sequence represents a gastrin fragment analogue, where at least one of Tyrl2 and Phel7 is intended to be replaced by N benzylglycine. N-cyclohexylmethylglycine or the ring substituted derivatives thereof.

The present sequence represents carboxy-amidated gastrin-17. Treatment of gastrin-17-dependent gastrointestinal tumours comprises administering to a mammal an anti-gastrin 17 (G17) immunogenic composition. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibits the growth of tumour cells dependent on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              progastrin G17-G1y as growth stímulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not

The sequence represents a synthetic biotinylated peptide substrate for human Janus kinase 3 (JAK3). The invention relates to the use of JAK57ATA (Janus kinase/signal transducer and activator of transcription) inhibitors other than debromchymenialdisine (DBH) and hymenialdisine (H) for inhibiting the progression or the likelihood of developing diseases involving cartilage degradation, and for requiating the expression or the likelihood of the expression of pro-inflammatory agents or cytokines in a chondrocyte, and cartilage degrading enzymes in a cell. A JAK3/STAT inhibitor of the invention is useful for inhibiting progression or likelihood of developing osteoarthritis or rheumatoid arthritis. The inhibitor is also useful for treating other JAK/STAT-mediated discases or disorders, including T cell-mediated disorders include human T cell-mediated disorders include human T cell-mediated disorders include human T cell eleukaemia/lymphoma virus (HTLV)-1, Sdzory's syndrome, c-abl transformation, natural killer-like T cell lymphomas (NK-like tumours) and graft-vs-host disease; cytokine hypersensitivity disorders include cute lymphocytic and lymphoplastic cleukaemias and lymphomas include acute lymphocytic and lymphoblastic leukaemias and lymphomas acute lymphocytic and lymphoblastic cleukaemias, B cell lymphomas and leukaemias of myeloid origin. DBH and H is the paper of the content in which JAK3 plays a role of the content in the infile the content in which JAK3 plays a role
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of inhibitors of Janus kinase/signal transducers and activators of transcription for inhibiting onset and progression of degenerative joint diseases or disorders such as osteoarthritis, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to detecting addition or removal of a phosphate group to or from a substrate. The method involves contacting a luminescent peptide with a binding partner that binds specifically to a phosphorylated peptide without regard to the particular amino acid sequence of the peptide. The method is useful for detecting phosphorylation and dephosphorylation modifications of proteins, including kinases and phosphatases. The methods can be used to study the kinase activity of different receptors e.g. the insulin receptor and to find agonists and antagonists of these receptors.
                                                                                                                                                                                                                                                                                                                                                                Assay for detecting phosphorylation and dephosphorylation modification of proteins by contacting luminescence peptide with a binding partner and measuring change in luminescence polarization .
                                                                                                                                                                                                                                                                                   Lee SK,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g., succinimidy1 and malelimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases | intracellular uptake and interference with physiological processes.

AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                       Protection, endogenous therapeutic peptide, peptidase, conjugation; blood component, modification; succinimidy1; maleimido group, amino; hydroxy1; thiol; hormone; growth factor; neurotransmitter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention relates to a reagent (I) for incorporation of a phosphorylation site by reaction with a reactive side chain of a compound to be phosphorylated. (I) comparises a structure A-B-C, where A is a moiety that is specifically reactive with a reactive side chain, C is a peptide sequence comprising kinase substrate, and B is a linking moiety selected from any one of the 19 compounds given in the specification e.g. N-gamma-maleimidobutyrylory-succinamide ester. (I) is useful for phosphorylation, by reacting (I) with a compound to be phosphorylated comprising a protein kinase under phosphorylating the resulting production in assays such as drug discovery. The method is suitable for radioactively phosphorylating already synthesised proteins, without the need to carry out recombinant methods to incorporate an amino acid sequence. The method is highly adaptable and can be used to phosphorylate or according that contain reactive site groups. (I) avoids production of proteins having an inaccessible kinase substrate sequence as can result from known recombinant methods. Introduction of capenates in proteins is possible merely by increasing the ratio of reagent to protein, and the method allows labeled increasing the ratio of reagent to protein sites in protein's function or become phosphorylating does not interfere with the protein's function or become conduction of reagent to protein, and the method allows labeled conducts to be obtained that have a higher specific activity that is commally obtained with recombinant methods. The present sequence conduction with recombinant methods. The present sequence conduction of the invention. The protein sequence conduction of protein folding. The method allows is conducted to protein sequence conduction of protein folding. The method allows have been accombinant methods. The present sequence conduction of the invention. The protein sequence conduction of protein folding. The method in examples that demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glycine-extended gastrin-17; gastrointestinal tumour; immunogen; colorectal adenocarcinoma; antibody; progastrin; cholecystokinin B; anti-gastrin-17; anti-617.
                                                                                                          Reagent for phosphorylating a compound, comprises a moiety that is specifically reactive with reactive site chain of the compound, a linking moiety and a peptide sequence comprising kinase substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence represents glycine-extended gastrin-17. Treatment of glycine-extended gastrin-17 (Gl7-Gly)-dependent gastrointestinal tumours comprises administering an anti-gastrin 17 (anti-Gl7) immunogenic comprises administering an anti-gastrin 17 (anti-Gl7) immunogenic comprosition. Anti-Gl7 immunogens raise antibodies which bind both the amidated and glycine-extended forms of Gl7. Neutralisation of progastrin Gl7-Gly prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin Gl7-Gly as growth stimulator or adenocarcinomas. In humans. This novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain
                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequence from the invasin protein of Yersinia. Components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.

The present sequence is an example of a gastrin hapten which can be bound to the immune stimulater furmours.
                                                                                                                                                                                                                                                                                                                                                                                                                   12 AA;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          M.A.; Gregory, R.A.; Hardy, P.M.; Kenner, G.W.; MacLeod,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gastrin precursor [validated] - dog

N; Contains: big gastrin; gastrin

G; Species: Canis Lupus familiaris (dog)

C; Decies: Canis Lupus familiaris (dog)

C; Accession: B61053; A61053; JS0425; A01620; B60070

C; Accession: B61053; A61053; JS0425; A01620; B60070

C; Accession: B61053; A61053; JS0425; A01620; B60070

A; Right: Cioning of canine gastrin cDNA's encoding variant amino acid sequences. A; Reference number: A61053; MUD:91085716; PMID:2262079

A; Accession: B61053

A; Accession: B61053

A; Residue: not compared with conceptual translation

A; Molecule type: mRNA

A; Residues: 1-104 < GAN>

A; Residues: 1-104 < GAN>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    using an oligonucleotide probe. "Opossum (Didelphis virginiana) 'little' and 'big' gastrins.";
"Opossum (Didelphis virginiana) 'little' and 'big' gastrins.";
-:- Comp. Biochem. Physiol. 968.239-242(1990).
-:- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stoma
                                                                                                                                                                                                                                                                                                                                                                                                                      -1- SUBCELLULAR LOCATION: Secreted.

-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

-I- FUNCTION: CATALYZES THE NAD-DEPENDENT OXIDATIVE CLEAVAGE OF SPERMIDINE AND THE SUBSEQUENT TRANSFER OF THE BUTYLAMINE MOIETY OF SPERMIDINE TO THE EPSILON-AMINO GROUP OF A SPECIFIC LYSINE RESIDUE OF THE EIF-5A PRECURSOR PROTEIN TO FORM THE INTERMEDIATE DEOXYHYPUSINE RESIDUE (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: [eIF5A-precursor]-lysine + spermidine = [eif5A-precursor]-deoxyhypusine + propane-1,3-diamine.
                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

"Chinchilla 'big' and 'little' gastrins.";
Blochem. Blophys. Res. Commun. 143:7-14(1987).
-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chinchilla brevicaudata (Chinchilla).
